

PLEASE READ FOR SAFE USE

Cloth Masks do not filter the Covid 19 Virus but can offer some protection. A cloth mask with a removeable filter increases the protection. If you don't use it properly it can increase your risk.

Wearing a cloth (or other type of mask) mask:

Store your mask in something when not in use.

The outside of the mask is considered dirty. If you touch it while wearing wash your hands well.

Before putting on mask clean your hands with hand sanitizer or soap well.

Masks should be placed over the mouth and nose to avoid gaps between face and mask.

Always wear your face mask with the same side out so you know which side is dirty and which side is clean. Different colors should help with this.

Stop wearing the mask if it becomes damp from breathing. Avoid wearing the mask more that 4-6 hrs.

Removing your mask: remember the front is considered dirty and the back considered clean.

Carefully remove your mask by taking the straps from the back of your head and pull forward. Do not reach under the mask with dirty hands.

Touch dirty to dirty, clean to clean.

Wash your hands and face immediately after removing mask.

Disinfecting your cloth mask: Immediately upon removing your mask, put it in Ziplock or container until you can wash in hot soapy water.

Wash your hands after touching.

Face masks should be machine-washed with soap and hot water to eliminate any residual particles which may be contaminating the outside of the mask.

You can also soak in boiling water, cool it and then scrub with soap by hand and hand to dry or put in dryer.

IF your mask has ties place in lingerie bag or inside a pillow case tied up to avoid tangling.

Items that can be used as filters:

HEPA cloth vacuum cleaner bag

Swiffer dry dusters

Olyfun/polypropylene cloth – Some reusable grocery bags are made of these

Blue Shop towels

Quality paper towel

Spread KINDNESS not germs and viruses 😊
